*Oxford Textbook of Oncology* May 04 2021 This textbook provides current information on best practice in multidisciplinary cancer care. Divided into six sections, the contributors look at the aetiology of cancer, patient care, population health and the management of specific types of disease. Written and edited by internationally recognised leaders in the field, the new edition of the Oxford Textbook of Oncology has been fully revised and updated, taking into consideration the advancements in each of the major therapeutic areas, and representing the multidisciplinary management of cancer. Structured in six sections, the book provides an accessible scientific basis to the key topics of oncology, examining how cancer cells grow and function, as well as discussing the aetiology of cancer, and the general principles governing modern approaches to oncology treatment. The book examines the challenges presented by the treatment of cancer on a larger scale within population groups, and the importance of recognising and supporting the needs of individual patients, both during and after treatment. A series of disease-oriented, case-based chapters, ranging from acute leukaemia to colon cancer, highlight the various approaches available for managing the cancer patient, including the translational application of cancer science in order to personalise treatment. The advice imparted in these cases has relevance worldwide, and reflects a modern approach to cancer care. The Oxford Textbook of Oncology provides a comprehensive account of the multiple aspects of best practice in the discipline, making it an indispensable resource for oncologists of all grades and subspecialty interests. Review: Each chapter is nicely illustrated with schemes, cartoons and images. The text, although written by top oncologists, is readily understandable for a non-expert. Thus, the textbook will no doubt be appreciated by a broader audience. \* Recent Patents on Anti-Cancer Drug Discovery Vol. 11 Issue No. 4, Alexander Shtil \* I recommend this book highly to all oncology and oncologists in training as a thorough, informative, and readable reference. Radicalism and Its Demise Sep 19 2022 This book chronicles the dynamics of local and central party politics as it describes the Nationalists' turn from radical to status-quo policies and practices. Geisert revisits important issues that continue to engage scholarship on the Republican era--in particular the social and political bases of Guomindang rule. He clarifies how Guomindang factions and to a lesser extent the Chinese Communist Party competed in local-level social movements and political struggles in Jiangsu. While most studies of modern Chinese state-making focus on government institutions, the author reminds us that the party organization must also be considered an important player in this process. Bradley Geisert teaches history at Randolph-Macon Women's College. He has published several papers on the Guomindang in Republican China.

Cancer Stem Cells in Solid Tumors Mar 14 2022 The "cancer stem cell" hypothesis postulates that cancer arises from a subpopulation of tumor-initiating cells or cancer stem cells (CSCs). While the idea of cancer stem cells has been around for more than a hundred years, evidence from the fields of hematology and cancer biology has now demonstrated the critical role of stem cells in hematological malignancies and suggested that these same mechanisms are also central to the initiation, progression, and treatment of solid cancers. Clinical and experimental studies have shown that CSCs exhibit many classical properties of normal stem cells, including a high self-renewal capacity and the ability to generate heterogeneous lineages; the requirement for a specific "niche"/microenvironment to grow; and an increased capacity for self-protection against harsh environments, toxins, and drugs. *Cancer Stem Cells in Solid Tumors* represents a detailed overview of cancer stem cells and their role in solid cancers. Comprised of 24 chapters, this volume will provide readers with a comprehensive understanding of this important and evolving field. Topics covered include: Introduction of the CSC hypothesis Historical perspectives and the contributing lessons from leukemia Current knowledge regarding the identification and role of CSCs in various forms of solid cancer including breast, brain, colorectal, pancreatic, prostate, melanoma, lung, ovarian, hepatocellular, and head and neck cancer Molecular pathways involved in driving CSC function, with a particular focus on the novel convergence of embryonic and tumorigenic signaling pathways In vitro and in vivo assays, model systems, and imaging modalities for studying CSCs The clinical importance of CSCs for cancer management and treatment, including important implications for prognosis, prediction, and treatment resistance Consideration of the controversy surrounding the CSC hypothesis and important unanswered questions in this field This collective work was written by a group of prominent international experts in cancer biology, oncology, and/or stem cell biology. It will serve as a valuable resource for established researchers, professors, health care professionals, and students in the medical and scientific community who are investigating stem cells and/or oncology.

*The Protection of the Underwater Cultural Heritage: An Emerging Objective of the Contemporary Law of the Sea* Aug 26 2020 The marine environment is almost ideal for the preservation of artefacts and, until relatively recently, it also provided complete protection from destruction by man. However, the aqualung has made most shallow underwater sites accessible, leading to widespread plundering. Current deep-sea bed technology now threatens deep water sites. There is a need for immediate international action to preserve the man-made environment, alongside the natural one. The enunciation of legal rules to protect the underwater cultural heritage is a complex issue, involving a matrix of interests and laws, both international and national.

*Citizens and Subjects of the Italian Colonies* Sep 27 2020 This is the first book on Italian colonialism that specifically deals with the question of citizenship/subjecthood. Such a topic is crucial for understanding both Italian imperial rule and the complex dynamics of the different colonial societies where several actors, like notables, political leaders, minorities, etc., were involved. The chapters gathered in the book constitute an unprecedented account of a heterogeneous geographical area. The cases of Eritrea, Libya, Dodecanese, Ethiopia, and Albania confirm that citizenship and subjecthood in the colonial context were ductile political tools, which were structured according to the orientations of the Metropole and the challenges that came from the colonial societies, often swinging between submission, cooptation to the colonial power, and resistance. On one hand, the book offers an account of the different policies of citizenship implemented in the Italian colonies, in particular the construction of graduated forms of citizenship, the repression and expulsion of dissidents, the systems of endearment of local people and cooptation of the elites, and the racialization of legal status. On the other, it deals with the various answers coming from the local populations in terms of resistance, negotiation, and construction of social identity.
