Stainless Steel Wires-Engineered

Multifunctional Ultra-High Performance

Concrete Nov 06 2023 The emergence and

application of stainless steel wires-

engineered multifunctional ultra-high

performance concrete advances the safety,

durability, function/intelligence, resilience,

and sustainability of infrastructure, thus

prolonging the service life and reducing the

maintenance to lower the lifecycle cost of

infrastructure. This is the first reference

work on this multifunctional concrete, which

combines high performance with functional/

smart properties, such as thermal, electrical,

self-sensing, and electromagnetic properties,

as well as a sustainable profile. The book

delivers both fundamentals and applications

about multifunctional concrete, covering basic

principles, properties, mechanisms,

engineering application cases, and future

development challenges and strategies.

Stainless Steel Wires-Engineered

Multifunctional Ultra-High Performance Concrete opens up a new horizon for researchers and specialist technologists in the field of concrete materials and structures.

Near-Net Shape Manufacturing of Miniature

Spur Gears by Wire Spark Erosion Machining Jun 08 2021 This work describes an experimental investigation with the aim to evaluate and establish wire spark erosion machining (WSEM) as a viable alternative for high quality miniature gear manufacturing. External spur type miniature brass (ASTM 858) gears with 12 teeth, 9.8 mm outside diameter and 5 mm face width were manufactured by WSEM. The research work was accomplished in four distinct experimental stages viz., preliminary, pilot, main and confirmation. The aim, scope and findings of each stage are progressively presented and discussed. In essence, the investigation found that it was possible to manufacture miniature gears to high quality by using WSEM. Gears up to DIN 5 quality with a good surface finish (1.2 μm average roughness) and satisfactory surface integrity were achieved. The results suggest that WSEM should be considered a viable alternative to conventional miniature gear manufacturing techniques and that in some instances it may even be superior. This work will prove useful to researchers and professionals in the field of miniature and micro-scale manufacturing and machining.
