National Constitutions in European and Global Governance: Democracy, Rights, the Rule of Law Sep 06 2021 This two-volume book, published open access, brings together leading scholars of constitutional law from twenty-nine European countries to revisit the role of national constitutions at a time when decision-making has increasingly shifted to the European and transnational level. It offers important insights into three areas. First, it explores how constitutions reflect the transfer of powers from domestic to European and global institutions. Secondly, it revisits substantive constitutional values, such as the protection of constitutional rights, the rule of law, democratic participation and constitutional review, along with constitutional court judgments that tackle the protection of these rights and values in the transnational context, e.g. with regard to the Data Retention Directive, the European Arrest Warrant, the ESM Treaty, and EU and IMF austerity measures. The responsiveness of the ECJ regarding the above rights and values, along with the standard of protection, is also assessed. Thirdly, challenges in the context of global governance in relation to judicial review, democratic control and accountability are examined. On a broader level, the contributors were also invited to reflect on what has increasingly been described as the erosion or 'twilight' of constitutionalism, or a shift to a thin version of the rule of law, democracy and judicial review in the context of Europeanisation and globalisation processes. The national reports are complemented by a separately published comparative study, which identifies a number of broader trends and challenges that are shared across several Member States and warrant wider discussion. The research for this publication and the comparative study were carried out within the framework of the ERC-funded

project 'The Role and Future of National Constitutions in European and Global Governance'. The book is aimed at scholars, researchers, judges and legal advisors working on the interface between national constitutional law and EU and transnational law. The extradition cases are also of interest to scholars and practitioners in the field of criminal law. Anneli Albi is Professor of European Law at the University of Kent, United Kingdom. Samo Bardutzky is Assistant Professor of Constitutional Law at the University of Ljubljana, Slovenia.

Handbook of Research on Global Education and the Impact of Institutional Policies on Educational Technologies Dec 22 2022 Emerging technologies in education are dramatically reshaping the way we teach, learn, and create meaning—both formally and informally. The use of emerging technologies within educational contexts requires new methodological approaches to teaching, learning, and educational research. This leads educational technology developers, researchers, and practitioners to engage in the creation of diverse digital learning tools that can be used in a wide range of learning situations and scenarios. Ultimately, the goal of today's digital learning experiences includes situational experiences wherein learners and teachers symbiotically enroll in meaning-making processes. Discussion, critical reflection, and critique of these emerging technologies, tools, environments, processes, and practices require scholars to involve themselves in critical conversation about the challenges and promises afforded by emerging technologies and to engage in deliberate thinking about the

critical aspects of these emerging technologies that are drastically reshaping education. The Handbook of Research on Global Education and the Impact of Institutional Policies on Educational Technologies deepens this discussion of emerging technologies in educational contexts and is centered at the intersection of educational technology, learning sciences, and socio-cultural theories. This book engages a critical conversation that will further the discussion about the pedagogical potential of emerging technologies in contemporary classrooms. Covering topics such as communication networks, online learning environments, and preservice teacher education, this text is an essential resource for educational professionals, preservice teachers, professors, teachers, students, and academicians.

Food Policy and Food Security Oct 27 2020 This book provides a comprehensive analysis of Russian food policy. Food policy is defined as the way government policy influences food production and distribution. Russia's food policy is important for several reasons. The first and most obvious reason is that a dysfunctional food policy is symptomatic of larger political and societal problems. A failing food policy is often the precursor to political instability. Russian food policy is also important is due to the agricultural recovery since 2004 that has allowed Russia to become self-sufficient in grain production. Being food-sufficient in grain means that Russia is not drawing upon global grain supply. Even more important, Russia now produces surpluses and has become a global grain supplier. Moreover, the agricultural recovery has made the country food secure, traditionally defined as having enough food for a healthy life. An analysis of food policy reveals that the structure of food production has changed with the emergence of mega-farms called agrohholdings that are horizontally and vertically integrated. Agrohholdings represent a concentration of capital and land, with a small number of farms producing large percentages of total food output. The book explores alternatives to the industrial agricultural model by discussing different variants of sustainable agriculture. A final importance of Russian food policy concerns food trade. Russia has become more protectionist since 2012. The food embargo against Western nations (2014-2017) is one example, so too is import substitution that is a core component of food policy. The book demonstrates the politicalization of external food trade. Food trade and denial of access to the Russian market is used as an instrument of foreign policy to punish countries with whom Russia has disagreements. Current Russian policymakers have food resources to augment, support, and extend national interests abroad. Russia historically has cycled through periods of integration and isolation from the West. This book raises the question whether a new normal has arisen that is characterized by the permanent withdrawal from integration, as evidenced by its nationalist and protectionist food policy. The book is entirely original, rich in detail and broad in scope. It is based on field work, survey data, a wide reading of primary sources and the secondary literature, all of which are linked to important policy questions in development studies and food studies. It

is destined to become a classic book on Russian food policy.

Handbook of Research on Smart Computing for Renewable Energy and Agro-Engineering May 15 2022 The rise in population and the concurrently growing consumption rate necessitates the evolution of agriculture to adopt current computational technologies to increase production at a faster and smoother scale. While existing technologies may help in crop processing, there is a need for studies that seek to understand how modern approaches like artificial intelligence, fuzzy logic, and hybrid algorithms can aid the agricultural process while utilizing energy sources efficiently. The Handbook of Research on Smart Computing for Renewable Energy and Agro-Engineering is an essential publication that examines the benefits and barriers of implementing computational models to agricultural production and energy sources as well as how these models can produce more cost-effective and sustainable solutions. Featuring coverage on a wide range of topics such as bacterial foraging, swarm intelligence, and combinatorial optimization, this book is ideally designed for agricultural engineers, farmers, municipal union leaders, computer scientists, information technologists, sustainable developers, managers, environmentalists, industry professionals, academicians, researchers, and students.
