Flickering Light Jun 09 2021 Without neon, Las Vegas might still be a sleepy desert town in Nevada and Times Square merely another busy intersection in New York City. Transformed by the installation of these brightly colored signs, these destinations are now world-famous, representing the vibrant heart of popular culture. But for some, neon lighting represents the worst of commercialism. Energized by the conflicting love and hatred people have for neon, Flickering Light explores its technological and intellectual history, from the discovery of the noble gas in late nineteenth-century London to its fading popularity today. Christoph Ribbat follows writers, artists, and musicians—from cultural critic Theodor Adorno, British rock band the Verve, and artist Tracey Emin to Vladimir Nabokov, Langston Hughes, and American country singers—through the neon cities in Europe, America, and Asia, demonstrating how they turned these blinking lights and letters into metaphors of the modern era. He examines how gifted craftsmen carefully sculpted neon advertisements, introducing elegance to modern metropolises during neon's heyday between the wars followed by its subsequent popularity in Las Vegas during the 1950s and '60s. Ribbat ends with a melancholy discussion of neon's decline, describing how these glowing signs and installations came to be seen as dated and characteristic of run-down neighborhoods. From elaborate neon lighting displays to neglected diner signs with unlit letters, Flickering Light tells the engrossing story of how a glowing tube of gas took over the world—and faded almost as quickly as it arrived.

Falling, Floating, Flickering Jul 31 2020 Insists on the importance of embodiment and movement to the creation of Black sociality Linking African diasporic performance, disability studies, and movement studies, Falling, Floating, Flickering approaches disability transnationally by centering Black, African, and diasporic experiences. By eschewing capital's weighted calculus of which bodies hold value, this book centers alternate morphologies and movement practices that have previously been dismissed as abnormal or unrecognizable. To move beyond binaries of ability, Hershini Bhana Young traverses multiple geohistories and cultural forms stretching from the United States and the Mediterranean to Sierra Leone, Nigeria, and South Africa, as well as independent and experimental film, novels, sculptures, images, dance, performances, and anecdotes. In doing so, she argues for the importance of differential embodiment and movement to the creation and survival of Black sociality, and refutes stereotypic notions of Africa as less progressive than the West in recognizing the rights of disabled people. Ultimately, this book foregrounds the engagement of diasporic Africans, who are still reeling from the violence of colonialism, slavery, poverty, and war, as they gesture toward a liberatory Black sociality by falling, floating, and flickering.

Brain-Computer Interfaces Aug 12 2021 The success of a BCI system depends as much on the system itself as on the user's ability to produce distinctive EEG activity. BCI systems can be divided into two groups according to the placement of the electrodes used to detect and measure neurons firing in the brain. These groups are: invasive systems, electrodes are inserted directly into the cortex are used for single cell or multi unit recording, and electrocorticography (EcoG), electrodes are placed on the surface of the cortex (or dura); noninvasive systems, they are placed on the scalp and use electroencephalography (EEG) or magnetoencephalography (MEG) to detect neuron activity. The book is basically divided into three parts. The first part of the book covers the basic concepts and overviews of Brain Computer Interface. The second part describes new theoretical developments of BCI systems. The third part covers views on real applications of BCI systems.
