NIST SP 800-72 Guidelines on PDA Forensics Jul 11 2021 NIST SP 800-72 November 2004 Personal Digital Assistants (PDAs) are a relatively recent phenomenon, not usually covered in classical computer forensics. This guide attempts to bridge that gap by providing an in-depth look into PDAs and explaining the technologies involved and their relationship to forensic procedures. It covers three families of devices - Pocket PC, Palm OS, and Linux-based PDAs - and the characteristics of their associated operating system. This guide also discusses procedures for the preservation, acquisition, examination, analysis, and reporting of digital information present on PDAs, as well as available forensic software tools that support those activities. Why buy a book you can download for

free? First you gotta find it and make sure it's the latest version, not always easy. Then you gotta print it using a network printer you share with 100 other people - and its outta paper - and the toner is low (take out the toner cartridge, shake it, then put it back). If it's just 10 pages, no problem, but if it's a 250-page book, you will need to punch 3 holes in all those pages and put it in a 3-ring binder. Takes at least an hour. An engineer that's paid \$75 an hour has to do this himself (who has assistant's anymore?). If you are paid more than \$10 an hour and use an ink jet printer, buying this book will save you money. It's much more cost-effective to just order the latest version from Amazon.com This public domain material is published by 4th Watch Books. geographical boundaries, economies, and sectors. Over the past decade, ICT has helped create the most rapidly growing industry sectors, driven efficiency in government and business operations, and developed the essential building blocks to a knowledge-based economy. The ability of ICT to change the way people do things is either hidden in internal processes---such as how a government office manages data collection---or manifest in the end product---such as digital support for health care services in a remote province. While the level and nature of the benefits of ICT may differ for every stakeholder, there is a consensus of what ICT can help provide to governments, businesses, and citizens: faster access to relevant information, an efficient means for communication, an enhanced ability to make informed decisions, and a voice to otherwise unheard peoples. As these cases from the Asian Development Bank would show, access to ICT alone will not result in significant, lasting change. It is the adoption of appropriate technology, paralleled with an enabling policy environment, a responsive and needs-based approach, improved individual and institutional capacity, nurtured partnerships with key stakeholders, leadership by local champions, effectively managed change, and sustained support that make the difference.
