Web services. "BEA WebLogic Workshop Kick Start" provides everything you need to get  
started with WebLogic Workshop, including a quick Java primer and appendixes covering  
the essentials of XML, SOAP and WSDL. Learn the features of WebLogic Workshop and  
review hundreds of code examples, and explore the inner workings of this new tool. The  
book's CD-ROM contains all the source code and examples from the book, plus a 90-day  
trial version of BEA WebLogic Platform, which includes WebLogic Workshop. Foreword  
Web services have attracted much attention recently as the next "big thing" in computer  
technology. Vendors of all shapes and sizes have announced their support for Web service  
technologies, and every month a new Web services conference is popping up somewhere  
the globe. With all this hype and attention, sometimes it's difficult to really discover what  
Web services are, where they fit in your company, what the business case is, and how you  
can actually get started taking advantage of this technology. BEA has been working with  
customers to answer many of these questions, and provide solutions that enable companies  
to easily construct Web services that meet their needs today. Contrary to the common  
conception of Web services as a consumer-focused technology, Web services may have their  
greatest potential as a technology inside enterprises as a new way of tying disparate  
applications together using standards-based technologies. To make Web services really  
work in the enterprise, however, it's essential that they meet core enterprise  
requirements: Web services applications have to exist in a constantly changing IT  
environment where different applications are built and modified by different people on  
different schedules. They must accommodate everything from modern J2EE-based  
applications, to legacy systems, to applications at business partners. They must be able to  
handle rich and complex information and transmit it between internal and external  
applications. They must easily interact with other applications to leverage existing  
investments. They must be robust, reliable, and they must perform. Perhaps most  
important of all, they have to be easy to build. For Web services to flourish within an  
organization, all developers will need to be able to build Web services that meet these  
requirements. "BEA WebLogic Workshop Kick Start" introduces you to BEA's new  
WebLogic Workshop product, a development tool and runtime framework that makes it  
easy to build powerful Web services that take advantage of the robust, enterprise features  
of the WebLogic J2EE application server. WebLogic Workshop provides a graphical tool  
that makes it easy to visualize, develop, and test Web service applications and visual  
controls that dramatically simplify access to existing resources like databases, packaged  
applications, Enterprise Java Beans, and other Web services. The Workshop framework

provides out-of-the-box support for building Web services that are loosely coupled so the internal implementation details of an application can be cleanly separated from the "public contract" that a Web service offers to other applications. This makes Workshop Web services flexible in the face of a constantly changing IT environment. Workshop provides built-in support for asynchronous messaging so that Web service applications carry on rich, two-way conversations with their clients and accommodate interaction with legacy systems and human users. Finally, Workshop supports easy manipulation of coarse-grained messages so that rich documents can be handled without resorting to tedious DOM programming. All of these capabilities can be accessed in a simple, declarative fashion that enables all developers not just J2EE experts to get started building Web services today. Even if you are new to the Java programming language, or have never built a J2EE application before, I think you will be surprised how easy it is to get started with Workshop. Working inside the WebLogic Workshop environment, you can focus on the procedural business code that is important to getting your applications built and leave the details of Web service and J2EE plumbing to the application framework. BEA WebLogic Workshop Kick Start will give you an introduction to Web services in general and teach you the few Java and J2EE concepts you will need to know along the way. Rich with examples, this book illustrates the power of Web services, and will help you realize the value they can bring to your company. --Carl Sjogreen, Product Manager, WebLogic Workshop, BEA Systems, Inc
